Safety as a Service

Protect your employees and your bottom line with outsourced safety administration

![wombat SAFETY SOFTWARE]

Does the recruiting, retention, and increasing salary expectations of in-house safety management cause you stress?

Is your safety administrator so overwhelmed with paperwork they never have time to get out into the field?

Does limited internal safety expertise make you worry that you "Don't know what you don't know"?

Do you have the software you need to be able to monitor your safety system?

Have you experienced a serious accident, or failed a compliance audit?

Are you struggling to establish a safety culture?

Are you missing out on new/larger opportunities due limitations in safety and compliance?

Safety as a Service

is a concept where safety solutions are provided to businesses on a subscription or pay-per-use basis.

It involves outsourcing safety-related functions or responsibilities to a third-party service provider, who then manages and ensures safety compliance, risk assessment, incident management, and other safety-related tasks.

Safety as a Service allows organizations to focus on their core activities while leveraging the expertise and resources of specialized safety providers to ensure a safe environment.

Why companies opt for Safety as a Service

1. **Access to Expertise**
2. **Cost-Effectiveness**
3. **Focus on Core Activities**
4. **Risk Mitigation**
5. **Scalability & Flexibility**

1 Access to Expertise

Safety as a Service enables companies to access specialists with extensive experience and expertise in various aspects of safety, including workplace safety, cybersecurity, and compliance management. By outsourcing safety tasks to these professionals, companies can tap into their knowledge and skills without having to hire and maintain an in-house safety team.

2 Cost Effectiveness

Maintaining an in-house safety department can be expensive, requiring investments in hiring, training, equipment, and ongoing operational costs. Safety as a Service offers a more cost-effective alternative, as companies can pay for the specific safety services they need without the overhead costs associated with an internal team.

3 Focus on Core Activities

Safety as a Service allows companies to focus on their core business activities without being burdened by the complexities of safety management. Organizations can then free up valuable time and resources to concentrate on driving innovation, growth, and profitability of their core activities.

4 Risk Mitigation

Safety as a Service providers can proactively identify and mitigate safety risks before they escalate into costly incidents or regulatory violations. With access to specialized expertise and advanced tools, organizations can enhance their risk management strategies and create safer environments for employees, customers, and stakeholders.

5 Scalability & Flexibility

Safety as a Service solutions are scalable and flexible, allowing companies to adjust their safety needs based on changing circumstances, such as business growth, regulatory changes, or emerging safety threats. Providers will tailor their services to meet the specific requirements of each client, ensuring that companies have the right level of safety support at all times.

How software enhances Safety as a Service

Safety software can be a valuable addition to a Safety as a Service package for several reasons:

1. Streamlined Safety Management

Safety software centralizes safety-related data, processes, and communication, making it easier for both the service provider and the client to manage safety tasks efficiently.

2. Improved Communication

By providing a centralized platform for sharing information, discussing safety concerns, and coordinating safety activities, safety software can enhance communication effectiveness and promote a culture of safety within the organization.

3. Enhanced Data Analysis & Reporting

By analyzing data, organizations can identify patterns, root causes, and emerging risks, allowing them to make informed decisions and take proactive measures to prevent accidents and injuries.

4. Scalability & Customization

Safety software can be tailored to meet the specific needs and preferences of each organization, allowing for scalability and customization as safety requirements evolve over time.
